

YOUR CHALLENGE

Make your own Skeleton hand

STEP 1

Gather Your Materials

STEP 2

Get to work!

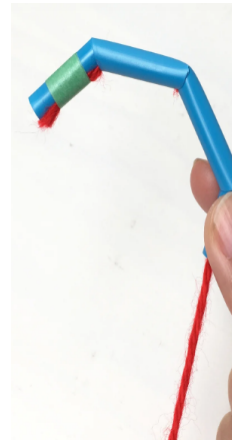

1. Use your scissors to make angled cuts on a straw.

Tip: Make sure the straw is still intact and that you're not cutting all the way through the straw.

2. Repeat step one two more times. Try spacing out the cuts to imitate the joints in your finger!

3. Cut the string just a bit longer than the straw and thread it through the straw. Tape one end of the string to the end of the straw.

4. On the other end, pull on the excess string and watch your straw finger curl!

STEP 3

Now complete your hand

How many more fingers can you create?
Challenge yourself by making a straw hand using
your cardboard - you might even be able to pick
something up or catch something with your hand
mechanism!
